

BSI Standards Publication

<https://www.china-gauges.com/>

Copper and copper alloys — Profiles and bars for general purposes

National foreword

This British Standard is the UK implementation of EN 12167:2024. It supersedes BS EN 12167:2016, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee NFE/34, Copper and copper alloys.

A list of organizations represented on the committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

This publication has been prepared under a mandate given to the European Standards Organizations by the European Commission and the European Free Trade Association. It is intended to support requirements of the EU legislation detailed in the European Foreword. A European Annex, usually Annex ZA or ZZ, describes how this publication relates to that EU legislation.

For the Great Britain market (England, Scotland and Wales), if UK Government has designated this publication for conformity with UKCA marking (or similar) legislation, it may contain an additional National Annex. Where such a National Annex exists, it shows the correlation between this publication and the relevant UK legislation. If there is no National Annex of this kind, the relevant Annex ZA or ZZ in the body of the European text will indicate the relationship to UK regulation applicable in Great Britain. References to EU legislation may need to be read in accordance with the UK designation and the applicable UK law. Further information on designated standards can be found at www.bsigroup.com/standardsandregulation.

For the Northern Ireland market, UK law will continue to implement relevant EU law subject to periodic confirmation. Therefore Annex ZA/ZZ in the European text, and references to EU legislation, are still valid for this market.

UK Government is responsible for legislation. For information on legislation and policies relating to that legislation, consult the relevant pages of www.gov.uk.

ICS 77.150.30

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 31 October 2024.

Amendments/corrigenda issued since publication

English Version

Copper and copper alloys - Profiles and bars for general purposes

Cuivre et alliages de cuivre - Profilés et barres pour usages généraux

Kupfer und Kupferlegierungen - Profile und Rechteckstangen zur allgemeinen Verwendung

This European Standard was approved by CEN on 30 June 2024.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (EN 12167:2024) has been prepared by Technical Committee CEN/TC 133 "Copper and copper alloys", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2025, and conflicting national standards shall be withdrawn at the latest by April 2025.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 12167:2016.

In comparison with EN 12167:2016, the following significant technical changes were made:

- a) Introduction of 6.7 Internal inclusion;
- b) Added a new figure for straightness at 6.5.4.2 and modified values in Table 21;
- c) Introduction in the chemical composition tables of a footnote to explain the meaning of elements for which no upper and lower limits are specified;
- d) CuSi4Zn4MnP (CW245E) and CuSi4Zn9MnP (CW246E) added in the new Table 2 and new Table 10;
- e) Chemical composition of CuZn39Pb3 (CW614N), CuZn40Pb2 (CW617N), CuZn35Pb1,5AlAs (CW625N) and CuZn33Pb1,5AlAs (CW626N) modified in the new Table 7;
- f) Added a new alloy CuZn40Pb1 (CW627N) in the new Table 7 and Table 15;
- g) Chemical composition of CuZn33Pb1AlSiAs (CW725R) modified in the new Table 8;
- h) Added a new alloy CuZn36Si1P (CW726R) in the new Table 8 and Table 16;
- i) Annex ZA added.

This document is one of a series of European Standards for the copper and copper alloy products rod, wire, profile and forgings. Other products are specified as follows:

- EN 12163, *Copper and copper alloys — Rod for general purposes*;
- EN 12164, *Copper and copper alloys — Rod for free machining purposes*;
- EN 12165, *Copper and copper alloys — Wrought and unwrought forging stock*;
- EN 12166, *Copper and copper alloys — Wire for general purposes*;
- EN 12168, *Copper and copper alloys — Hollow rod for free machining purposes*;
- EN 13601, *Copper and copper alloys — Copper rod, bar and wire for general electrical purposes*;
- EN 13602, *Copper and copper alloys — Drawn, round copper wire for the manufacture of electrical conductors*;

— EN 13605, *Copper and copper alloys — Copper profiles and profiled wire for electrical purposes*.

This document has been prepared under a standardization request addressed to CEN by the European Commission. The Standing Committee of the EFTA States subsequently approves these requests for its Member States.

For the relationship with EU Legislation, see informative Annex ZA, which is an integral part of this document.

Any feedback and questions on this document should be directed to the users' national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Introduction

The European Committee for Standardization (CEN) draws attention to the fact that it is claimed that compliance with this document may involve the use of a patent concerning the alloys CuSi4Zn4MnP (CW245E), CuSi4Zn9MnP (CW246E) and CuZn36Si1P (CW726R) given in 6.1.

CEN takes no position concerning the evidence, validity and scope of this patent right.

The holder of this patent right has ensured the CEN that he is willing to negotiate licenses either free of charge or under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of this patent right is registered with CEN.

- For CuSi4Zn4MnP (CW245E) and CuSi4Zn9MnP (CW246E) information may be obtained from:

Viega Technology GmbH & Co. KG
Viega Platz 1
57439 Attendorn
GERMANY

- For CuZn36Si1P (CW726R) information may be obtained from:

Luvata Oy
Kuparitie 5
28330 Pori
FINLAND

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. CEN shall not be held responsible for identifying any or all such patent rights.

CEN and CENELEC maintain online lists of patents relevant to their standards. Users are encouraged to consult the lists for the most up to date information concerning patents (<https://www.cencenelec.eu/european-standardization/ipr-and-patents/patents/>).

Due to developing legislation, the composition of a material may be restricted to the composition specified in this European Standard with respect to individual uses (e.g. for the use in contact with drinking water in some Member States of the European Union). These individual restrictions are not part of this European Standard. Nevertheless, for materials for which traditional and major uses are affected, these restrictions are indicated. The absence of an indication, however, does not imply that the material can be used in any application without any legal restriction.

1 Scope

This document specifies the composition, property requirements and dimensional tolerances for copper alloy profiles including L-, T-, U-shaped cross-sections, and bars, finally produced by drawing or extruding.

This document applies to profiles with L-, T- and U-shaped cross-sections which would fit within a circumscribing circle of a maximum 180 mm diameter and to bars with thicknesses from 3 mm up to and including 60 mm and with widths from 6 mm up to and including 120 mm.

The sampling procedures, the methods of test for verification of conformity to the requirements of this document, are also specified.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

profile

straight product of uniform cross-section along its whole length, in the shape other than rod, hollow rod, bar, tube, sheet or strip

3.2

bar

straight product of uniform rectangular cross-section along its whole length

4 Designations

4.1 Material

4.1.1 General

The material is designated either by symbol or by number (see Tables 1 to 8).

4.1.2 Symbol

The material symbol designation shall be based on the designation system given in ISO 1190-1:1982.

NOTE Although material symbol designations used in this standard might be the same as those in other standards using the designation system given in ISO 1190-1:1982, the detailed composition requirements are not necessarily the same.

4.1.3 Number

The material number designation shall be in accordance with the system given in EN 1412:2016.

4.2 Material condition

For the purposes of this document, the following designations, which are in accordance with the system given in EN 1173:2008, apply for the material condition:

- | | |
|------------|---|
| M | material condition for the product as manufactured, without specified mechanical properties; |
| R... | material condition designated by the minimum value of tensile strength requirement for the product with mandatory tensile strength requirement; |
| H... | material condition designated by the minimum value of hardness requirement for the product with mandatory hardness requirement; |
| S (suffix) | material condition for a product which is stress relieved. |

Products in the M, R... or H... material condition may be specially processed (i.e. mechanically or thermally stress relieved) in order to lower the residual stress level to improve the resistance to stress corrosion and the dimensional stability on machining [see Clause 5 list entry j), list entry k) and 8.5].

Exact conversion between material conditions designated R... and H... is not possible.

Except when the suffix S is used, material condition is designated by only one of the above designations.

4.3 Product

The product designation provides a standardized pattern of designation from which a rapid and unequivocal description of a product can be conveyed in communication. It provides mutual comprehension at the international level with regard to products which meet the requirements of the relevant European Standard.

The product designation is no substitute for the full content of the standard.

The product designation for products to this standard shall consist of:

- denomination (profile or bar);
- number of this document (EN 12167);
- material designation, either symbol or number (see Tables 1 to 8);
- DW for compliance in the chemical composition according to the 4 MS Common Composition List. This information is mandatory in the case in which the product is used for drinking water applications according to the 4 MS Common Composition List and not to be given in other cases (see Bibliography [4]);
- material condition designation (see Tables 9 to 16);
- for profiles, the number of the profile or a fully dimensioned and toleranced drawing;
- for profiles with L-, T-, U-shaped cross-sections, the nominal cross-sectional dimensions;
- for bar, the nominal cross-sectional dimensions;
- for bar and profiles with L-, T-, U-shaped cross-sections, the tolerance class (see Table 17 to 19);
- for bar, the corner shape (the following designations shall be used as appropriate: SH for sharp, RD for rounded) (see Table 23).

The derivation of a product designation is shown in the following examples.

EXAMPLE 1 Bar conforming to this standard, in material designated either CuZn40Pb2 or CW617N, for standard applications, in material condition H110, nominal cross-sectional dimensions 30 mm × 10 mm, tolerance Class B, with sharp corners, will be designated as follows:

Bar EN 12167 — CuZn40Pb2 — H110 — 30 × 10 — B — SH

or

Bar EN 12167 — CW617N — H110 — 30 × 10 — B — SH

Denomination _____

Number of European Standard _____

Material designation _____

Material condition designation _____

Nominal cross-sectional dimension in millimetres _____

Tolerance class _____

Corner designation _____

EXAMPLE 2 Bar conforming to this standard, in material designated either CuZn40Pb2 or CW617N for drinking water applications according to the 4 MS Common Composition List, in material condition H110, nominal cross-sectional dimensions 30 mm × 10 mm, tolerance Class B, with sharp corners, will be designated as follows:

Bar EN 12167 — CuZn40Pb2 — DW — H110 — 30 × 10 — B — SH

or

Bar EN 12167 — CW617N — DW — H110 — 30 × 10 — B — SH

Denomination _____

Number of European Standard _____

Material designation _____

For the use in contact with drinking water
according to 4 MS Common Composition List,
(restriction in chemical composition)

Material condition designation _____

Nominal cross-sectional dimension in millimetres _____

Tolerance class _____

Corner designation _____

EXAMPLE 3 Profile conforming to this standard, in material designated either CuZn43Pb2Al or CW624N, for standard applications, in material condition M, drawing number S123, will be designated as follows:

Profile EN 12167 — CuZn43Pb2Al — M — S123

or

Profile EN 12167 — CW624N — M — S123

5 Ordering information

In order to facilitate the enquiry, order and confirmation of order procedures the following information shall be specified:

- a) mass of product required;
 - b) denomination (profile or bar);
 - c) number of this document (EN 12167);
 - d) material designation (see Tables 1 to 8);
 - e) for bar, the material condition designation (see 4.2 and Tables 9 to 16), if it is other than M;
 - f) DW for compliance in the chemical composition according to the 4 MS Common Composition List. This information is mandatory in the case in which the product is used for drinking water applications according to the 4 MS Common Composition List and not to be given in other cases;
 - g) size and shape required:
 - 1) for profiles, by fully dimensioned and toleranced drawing, which shall include any specific requirements for straightness and twist and, if appropriate, for flatness;
 - 2) for profiles with L-, T- and U-shaped cross-sections by dimensions and tolerance class (i.e. Class A, B — see Tables 17 and 18), unless the choices of tolerance class are left to the discretion of the supplier;
 - 3) for bar, by dimensions and tolerance class (i.e. Class A, B or C — see Tables 19, 21, 22 and 6.5.3.2), and whether sharp or rounded corners (see Table 23) are required, unless the choices of tolerance class and corner radii are left to the discretion of the supplier;
 - h) length of product required:
 - 1) for profiles, the length and the tolerance on length, unless the lengths supplied are left to the discretion of the supplier;
 - 2) for bar, the nominal length (see Table 20).
- It is recommended that the product designation, as described in 4.3, is used for items b) to h).
- In addition, it shall also state on the enquiry and order any the following, if required:
- i) whether the products according to 6.3, are required to pass a dezincification resistance test (see 8.4);
 - j) whether the products are required to pass a stress corrosion resistance test; if so, which test method shall be used (see 8.5) if the choice is not to be left to the discretion of the supplier;
 - k) whether the products shall be supplied in a thermally stress relieved material condition;
 - l) for profiles, whether any additional properties or requirements, not specified within the standard, are required;

Details of any mechanical property requirements for profiles, together with the location in the profile from which the test piece should be machined, should be agreed between the involved parties (see 6.2.1).

- m) whether special surface quality is required (see 6.6);
- n) whether a certificate of compliance is required (see 9.1);
- o) whether an inspection document is required, and if so, which type (see 9.2);
- p) whether there are any special requirements for marking, packaging or labelling (see Clause 10).

EXAMPLE 1 Ordering details for 500 kg bar conforming to EN 12167, in material designated either CuZn40Pb2 or CW617N, for drinking water application according to the 4 MS Common Composition List in material condition H110, nominal cross-sectional dimensions 30 mm × 10 mm, tolerance Class B, with sharp corners, nominal length 3 000 mm.

500 kg Bar — CuZn40Pb2 — DW — H110 — 30 × 10 — B — SH
EN 12167

— nominal length 3 000 mm

or

500 kg Bar — CW617N — DW — H110 — 30 × 10 — B — SH
EN 12167

— nominal length 3 000 mm

EXAMPLE 2 Ordering details for 1 000 kg profiles conforming to EN 12167, in material designated either CuZn43Pb2Al or CW624N, in material condition M, to drawing number S123, nominal length 3 000 mm.

1 000 kg Profile EN 12167 — CuZn43Pb2Al — M — S123
— nominal length 3 000 mm

or

1 000 kg Profile EN 12167 — CW624N — M — S123
— nominal length 3 000 mm

6 Requirements

6.1 Composition

The composition shall conform to the requirements for the appropriate material given in Tables 1 to 8.

Due to developing legislation, specific applications (see 4.3) may require restrictions in the chemical composition. In this case the limitations shall be specified in the ordering information [see Clause 5, list entry f)].

6.2 Mechanical properties

6.2.1 Profiles

Mechanical properties of profiles depend on the shape, dimensions and the material. For this reason, mechanical properties of profiles are not specified in this standard but, if needed, are subject to agreement between the involved parties [see Clause 5, list entry l)].

6.2.2 Bar

Bar in the R... or H... condition shall conform to the appropriate tensile or hardness requirements given in Tables 9 to 16. The tests shall be carried out in accordance with 8.2 or 8.3.

6.3 Resistance to dezincification

This requirement only applies to materials that are declared resistant to dezincification.

The maximum depth of dezincification, in any direction, of CuZn8As (CW511L), CuZn36Pb2As (CW602N), CuZn32Pb2AsFeSi (CW709R), CuZn21Si3P (CW724R) and CuZn33Pb1AlSiAs (CW725R) products shall not exceed 100 µm. For the alloys CuZn35Pb1,5AlAs (CW625N), CuZn33Pb1,5AlAs (CW626N) the maximum depth of dezincification, in any direction, shall not exceed 200 µm.

The test shall be carried out in accordance with 8.4.

NOTE Shape and distribution of beta phase aggregates can influence the dezincification resistance of products. Special requirements relating to shape and distribution of β phase aggregates are subject to agreement between the involved parties.

Products in alloys other than CuZn21Si3P (CW724R) shall be subjected to heat treatment approximately in the range 500 °C to 550 °C. Should the user need to heat the material out of the range before specified (i.e. soldering, brazing or welding operations) then advice should be sought from the supplier.

6.4 Residual stress level

Products ordered and supplied in the stress relieved material condition (see 4.2, 2nd paragraph) shall show no evidence of cracking if tested. The tests shall be carried out in accordance with 8.5.

6.5 Dimensions and tolerances

6.5.1 Cross-sectional dimensions

6.5.1.1 Profiles

The cross-sectional dimensions of the profile shall conform to the tolerances specified in the drawing supplied and agreed at the time of the enquiry and/or order [see Clause 5 list entry g)].

6.5.1.2 Profiles with L-, T- and U-shaped cross-sections

The width of the base b and the height of a leg h of the profile shall conform to the tolerances given in Table 17 [see Clause 5 list entry g)]. The thickness of the profile shall conform to the tolerances given in Table 18 [see Clause 5 list entry g)]. The allowed angle deviation in mm is $w = \pm 0,025 b$ or $w = \pm 0,025 h$.

The tolerances given in Table 17 and 18 are applicable to the profiles within a circumscribing circle with a maximum diameter of 180 mm.

6.5.1.3 Bar

The width and thickness of bar shall conform to the tolerances given in Table 19 for the appropriate alloy and tolerance class [see Clause 5 list entry g)].

6.5.2 Length

6.5.2.1 Profiles

The length of the profiles shall conform to the tolerances specified at the time of the order [see Clause 5 list entry h)].

6.5.2.2 Bar

The length of bar shall conform to the tolerances given in Table 20.

Subject to agreement between the involved parties, an agreed proportion of underlength profiles or bar may be included in a consignment.

6.5.3 Flatness

6.5.3.1 Profiles

If appropriate, the maximum deviation from flatness shall be agreed between the involved parties and stated on the order/drawing [see Clause 5 list entry g)].

6.5.3.2 Bar

The maximum deviation from flatness (e) in Figure 1) of bar (thickness a , width b) is dependent on the tolerance class [see Clause 5 list entry g)] and shall be:

- Class A: 0,4 mm;
- Class B: 0,3 mm;
- Class C: 0,2 mm.

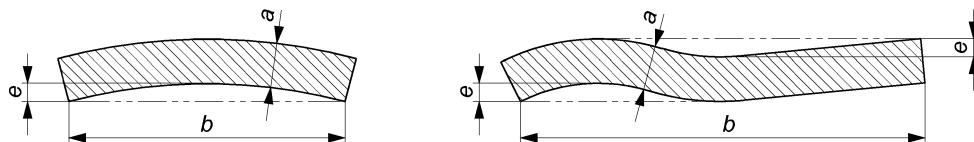

Figure 1 — Measurement of flatness of bar

6.5.4 Straightness

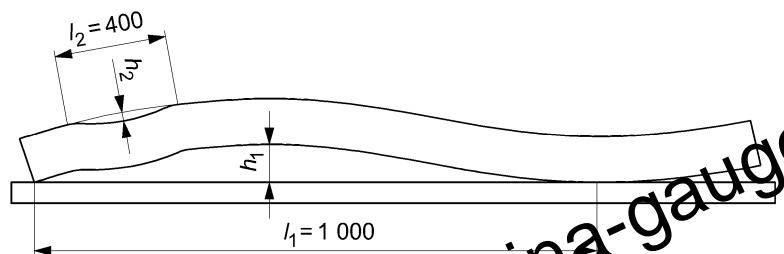

6.5.4.1 Profiles

The tolerance on straightness shall be agreed between the involved parties and stated on the order/drawing, [see Clause 5 list entry g)].

6.5.4.2 Bar

For widths 10 mm and over, and lengths 1 000 mm and over, the deviation from straightness, defined as the curvature (depth of arc) against a datum line when the product is lying flat in a horizontal plane (see Figure 2), shall conform to the tolerances given in Table 21 for the appropriate tolerance class [see Clause 5 list entry g)].

Dimensions in millimetres

Key

h_1 depth of arc in any length l_1 of 1000

h_2 depth of arc in any length l_2 of 400

Figure 2 — Measurement of straightness

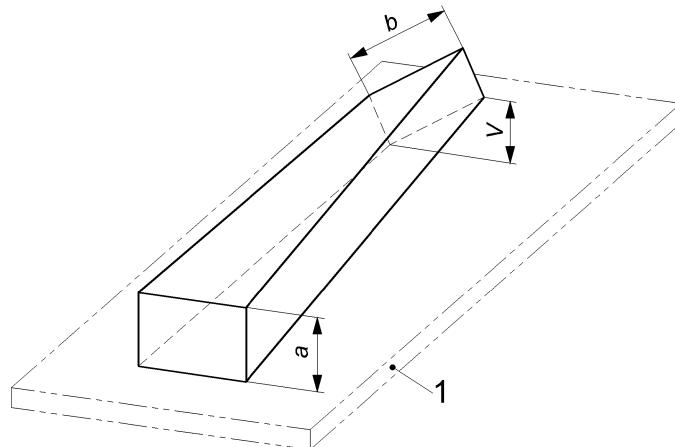

6.5.5 Twist

6.5.5.1 Profiles

The tolerance on twist shall be agreed between the involved parties and stated on the order/drawing [see Clause 5 list entry g)].

6.5.5.2 Bar

The maximum permitted twist V (see Figure 3) of bar (thickness a , width b), as measured between two cross-sections along the bar, shall conform to Table 22 for the appropriate tolerance class [see Clause 5 list entry g)].

Key

1 reference plane

a thickness

b width

V twist

Figure 3 — Measurement of twist of bar

6.5.6 Corner radii of bar

The corner radii of bar shall conform to Table 23 [see Clause 5 list entry g)].

If it is required to have larger radii than those specified in Table 23, then the product is effectively a profile and the dimensions and tolerances of the corner radii required should be stated on the order/drawing.

Except in cases of dispute, the corners should be measured directly, either by using a gauge or an optical projector. In cases of dispute, the method by optical projector should be used.

6.6 Surface quality

The surfaces shall be clean and smooth. The profiles and bars may have a superficial film of drawing lubricant or, if annealed or thermally stress relieved, a superficial, dull, iridescent oxide film, securely adherent on the surfaces.

Discontinuous irregularities on the surfaces of the profiles and bars are permitted if they are within the dimensional tolerances.

Special requirements (e.g. pickling, degreasing, etc.) relating to the surface quality shall be agreed between the involved parties [see Clause 5, list entry m)].

6.7 Internal inclusion

Freedom of internal inclusions cannot be ensured in any copper alloys.

7 Sampling

7.1 General

When required or for use in cases of dispute, an inspection lot of profiles or bars shall be sampled in accordance with 7.2 to 7.4.

7.2 Analysis

The sampling rate shall be in accordance with Table 24. A test sample, depending on the analytical technique to be employed, shall be prepared from each sampling unit and used for the determination of the composition.

When preparing the test sample, care should be taken to avoid contaminating or overheating the test sample. Carbide tipped tools are recommended; steel tools, if used, should be made of magnetic material to assist in the subsequent removal of extraneous iron. If the test samples are in finely divided form (e.g. drillings, millings), they should be treated carefully with a strong magnet to remove any particles of iron introduced during preparation.

In cases of dispute concerning the results of analysis, the full procedure given in ISO 1811-2 should be followed.

Results may be used from analyses carried out at an earlier stage of manufacturing the product, e.g. at the casting stage, if the material identity is maintained and if the manufacturer can ensure the traceability of the product.

7.3 Tensile and hardness tests

The sampling rate shall be in accordance with Table 24. Sampling units shall be selected from the finished products. The test samples shall be cut from the sampling units. Test samples, and test pieces prepared from them, shall not be subjected to any further treatment other than any machining operations necessary in the preparation of the test pieces.

7.4 Dezincification resistance and stress corrosion resistance tests

The sampling rate which shall be applied to finished products, shall be:

- for products that have been heat treated: one sampling unit per heat treatment batch;
- for products that have not been heat treated: in accordance with Table 24.

The test samples shall be cut from the sampling units. Test samples, and test pieces prepared from them, shall not be subjected to any further treatment, other than any machining operations necessary in the preparation of the test pieces.

8 Test methods

8.1 Analysis

Analysis shall be carried out on the test pieces, or test portions, prepared from the test samples obtained in accordance with 7.2. Except in cases of dispute, the analytical methods used shall be at the discretion of the supplier. In cases of dispute the methods of analysis to be used shall be agreed between the disputing parties. For expression of results, the rounding rules given in 8.7 shall be used.

8.2 Tensile test

8.2.1 General

Tensile test pieces shall be prepared in accordance with 8.2.2 and 8.2.3 and the test shall be carried out in accordance with 8.2.4.

8.2.2 Location of test pieces

For bar, test pieces shall be machined from one of the following locations, in accordance with ISO 4739:1985, in the test sample obtained in accordance with 7.3:

- a) for bar of thickness up to and including 10 mm, use a flat test piece, made so that the two wider surfaces are included undisturbed;
- b) for bar of thickness over 10 mm, up to and including 25 mm, use a round test piece, the longitudinal axis of which shall be located at a distance from the surface equal to half the thickness;
- c) for bar of thickness over 25 mm, use a round test piece, the longitudinal axis of which shall be located 13 mm from one of the wider faces.

For profiles, test pieces shall be machined from the location in the profiles requested at the time of the order [see Clause 5 list entry k)].

In all cases, the axis of the test piece shall be parallel to the extrusion (or working) direction.

8.2.3 Shape and size of test pieces

Test pieces shall be in accordance with EN ISO 6892-1:2019, except that 200 mm gauge length is not permitted.

Elongation requirements for rod of thickness or diameter equivalent to the cross sectional area:

- a) less than 4 mm (A₁₀₀ mm);
- b) 4 mm up to and including 8 mm (A_{11,3});
- c) greater than 8 mm (A);

are based on original gauge lengths of 100 mm, $11,3 \sqrt{S_o}$ mm and $5,65 \sqrt{S_o}$ mm respectively, where S_o is the original cross-sectional area of the test piece in square millimetres.

8.2.4 Procedure for testing

The tensile test shall be carried out in accordance with the method given in EN ISO 6892-1:2009.

8.2.5 Expression of results

Tensile strength shall be calculated from the tensile test results obtained in accordance with 8.2.4. For expression of results, the rounding rules given in 8.7 shall be used.

8.3 Hardness test

Hardness shall be determined on test pieces cut from a test sample obtained in accordance with 7.3. The test shall be carried out in accordance with EN ISO 6506-1:2014 and the impression/indentation made:

- a) in the case of bar, on the cross-section of the product midway between the central axis and the outside surface;
- b) in the case of profiles, at the midpoint of the thickest part of the profile cross-section, unless otherwise specified at the time of the order.

8.4 Dezincification resistance test

The test method given in EN ISO 6509-1:2014 shall be used on the test samples obtained in accordance with 7.4 [see Clause 5 list entry i)].

A test piece shall be taken from each test sample, so as to expose a prepared cross-sectional surface to the test solution.

At the completion of the test the maximum depth of dezincification in a longitudinal direction shall be measured;

8.5 Stress corrosion resistance test

The test method given in either ISO 6957:1988 (using pH 10,0) or EN 14977:2006 shall be used on the test pieces prepared from the test samples obtained in accordance with 7.4. The choice of which of these tests is used shall be at the discretion of the supplier, unless a preference is agreed at the time of the order [see Clause 5 list entry j)].

8.6 Retests

8.6.1 Analysis, tensile, hardness and dezincification resistance tests

If there is a failure of one, or more than one, of the tests in 8.1, 8.2, 8.3 or 8.4, two test samples from the same inspection lot shall be permitted to be selected for retesting the failed property (properties). One of these test samples shall be taken from the same sampling unit as that from which the original failed test piece was taken, unless that sampling unit is no longer available, or has been withdrawn by the supplier.

If the test pieces from both test samples pass the appropriate test(s), then the inspection lot represented shall be deemed to conform to the particular requirement(s) of this standard. If a test piece fails a test, the inspection lot represented shall be deemed not to conform to this standard.

NOTE If an inspection lot of alloy of dezincification resistant alloys fails the dezincification resistance test when tested or retested, the supplier has the option to heat treat, or to further heat treat, the inspection lot and resubmit it for all the tests called for on the order, except for analysis.

8.6.2 Stress corrosion resistance test

If a test piece fails the test, the inspection lot represented by the failed test piece shall be permitted to be subjected to a stress relieving treatment. A further test sample shall then be selected in accordance with 7.4.

If a test piece from the further test sample passes the test, the stress relieved product shall be deemed to conform to the requirements of this standard for residual stress level and shall then be subjected to all the other tests called for on the order, except for analysis. If the test piece from the further test sample fails the test, the stress relieved product shall be deemed not to conform to this standard.

8.7 Rounding of results

For the purpose of determining conformity to the limits specified in this standard an observed or a calculated value obtained from a test shall be rounded in accordance with the following procedure, which is based upon the guidance given in EN ISO 80000-1. It shall be rounded in one step to the same number of figures used to express the specified limit in this European Standard. Except for tensile strength and the 0,2 % proof strength the rounding interval shall be 10 N/mm² ¹⁾

The following rules shall be used for rounding:

- a) if the figure immediately after the last figure to be retained is less than 5, the last figure to be retained shall be kept unchanged;
- b) if the figure immediately after the last figure to be retained is equal to or greater than 5, the last figure to be retained shall be increased by one.

9 Certificate of compliance and inspection documentation

9.1 Certificate of compliance

When requested and agreed at the time of the order [see Clause 5 list entry n)] the appropriate certificate of compliance shall be issued for the products. The relevant information is available in EN ISO/IEC 17050-1:2010 and EN ISO/IEC 17050-2:2004.

9.2 Inspection documentation

When requested and agreed at the time of the order [(see Clause 5 list entry o)] the appropriate inspection document, in accordance with EN 10204:2004 shall be issued for the products.

For pressure equipment applications, the equipment manufacturer has the obligation to request the appropriate inspection documentation according to the applicable product or application standard(s), EN 764-5:2014 and EN 10204:2004.

10 Marking, packaging, labelling

Unless otherwise specified at the time of the order, the marking, packaging and labelling shall be left to the discretion of the supplier [see Clause 5 list entry p)].

1) 1 N/mm² is equivalent to 1 MPa.

| 18 | 30 | ±0,15 | ±0,07 | ±0,09 | ±0,10 | ±0,15 | — | — |
| 30 | 50 | ±0,20 | ±0,09 | ±0,10 | ±0,12 | ±0,15 | ±0,20 | — |
| 50 | 80 | ±0,25 | ±0,11 | ±0,12 | ±0,15 | ±0,20 | ±0,25 | — |
| 80 | 120 | ±0,30 | ±0,12 | ±0,15 | ±0,18 | ±0,23 | ±0,35 | — |

^a Including 6.

^b Class A tolerances are normally intended for extruded products.

^c Class B tolerances are normally intended for drawn products.

^d Class C tolerances are normally intended for drawn products only available for the materials given in Tables 6 and 7.

Table 20 — Tolerances on length of bar

Dimensions in millimetres

| Nominal width over | up to and including | Preferred (available) lengths | Tolerance on length |
|-----------------------|---------------------|-------------------------------------|------------------------|
| 6 ^a | 18 | 3 000, 4 000 | ±50 |
| 18 | 30 | 3 000, 4 000 | ±100 |
| 30 | 50 | 2 000, 3 000, 4 000 | ±150 |
| 50 | 80 | 2 000, 3 000 | ±200 |
| 80 | 120 | 1 000, 2 000 | ±200 |

^a Including 6.

Table 21 — Tolerances on straightness of bar, for widths 10 mm and over

| Tolerance class | Maximum deviation from straightness (see 6.5.4.2 - Figure 1) mm | |
|--------------------|--|--|
| | <i>h</i> 2 depth of arch in any length <i>l</i> 2 of 400 mm | <i>h</i> 1 depth of arch in any length <i>l</i> 1 of 1000 mm |
| A | 2,4 | 6,0 |
| B | 1,6 | 4,0 |
| C | 0,8 | 2,0 |

Table 22 — Maximum twist of bar

Dimensions in millimetres

| Nominal width over | up to and including | Maximum permitted twist <i>V</i> in any 1 000 mm length of bar (see Figure 3) | | |
|-----------------------|---------------------|--|---------|---------|
| | | class A | class B | class C |
| 6 ^a | 18 | 2,0 | 1,5 | 1,0 |
| 18 | 30 | 3,0 | 2,3 | 1,5 |
| 30 | 50 | 4,0 | 3,0 | 2,0 |
| 50 | 80 | 6,0 | 4,5 | 3,0 |
| 80 | 120 | 9,0 | 7,0 | 4,5 |

For bar of total length greater than 2 000 mm, the permitted twist over the total length shall be twice the appropriate maximum given in the table for "in any 1 000 mm".

^a Including 6.

Table 23 — Corner radii of bar

Dimensions in millimetres

| Nominal thickness over | up to and including | Radii of corners | |
|---------------------------|---------------------|------------------|------------------|
| | | Sharp max. | Rounded range |
| 3 ^a | 6 | 0,3 | 0,3 to 0,5 |
| 6 | 10 | 0,4 | 0,4 to 0,8 |
| 10 | 18 | 0,5 | 0,5 to 1,2 |
| 18 | 30 | 0,6 | 0,6 to 1,8 |
| 30 | 40 | 0,7 | 0,7 to 2,8 |
| 40 | 60 | 0,8 | 0,8 to 4,0 |

NOTE 1 The requirements in this table for sharp corners are only applicable to materials given in Tables 6 and 7.

NOTE 2 A bar having rounded corners of radius greater than those covered by this table is considered to be a profile.

^a Including 3.

Table 24 — Sampling rate

| Mass per unit length kg/m | over | Size of inspection lot for one test sample | |
|------------------------------|------|---|---------------------------|
| | | up to and including | kg up to and including |
| — | — | 25 | 1 000 |
| 25 | — | — | 2 000 |

NOTE Larger quantities require sampling in proportion, up to a maximum of three test samples.

Annex ZA
(informative)

Relationship between this European Standard and the essential requirements of Directive 2014/68/EU (Pressure equipment Directive) aimed to be covered

This European Standard has been prepared under a Commission's standardization request M/601 to provide one voluntary means of conforming to essential requirements of Directive 2014/68/EU.

Once this standard is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of this standard given in Table ZA.1 confers, within the limits of the scope of this standard, a presumption of conformity with the corresponding essential requirements of that Directive and associated EFTA regulations.

For this harmonized supporting standard for materials, presumption of conformity to the Essential Requirements of the Directive is limited to technical data of the material in the standard and does not presume adequacy of the material to specific equipment. Consequently, the technical data stated in the material standard should be assessed against the design requirements of the specific equipment to verify that the Essential Requirements of the Pressure Equipment Directive (PED) are satisfied.

Table ZA.1 — Correspondence between this European Standard and Annex I of Directive 2014/68/EU (Pressure equipment Directive)

| Essential Requirements of the Directive 2014/68/EU | Clause(s)/subclause(s) of this EN | Remarks/Notes |
|---|--|---|
| 4.1 (a) | 6.2 | Mechanical properties |
| 4.3 | 9.2, second paragraph | Conformity of material and manufacturer's certified documentation |

WARNING 1 — Presumption of conformity stays valid only as long as a reference to this European Standard is maintained in the list published in the Official Journal of the European Union. Users of this standard should consult frequently the latest list published in the Official Journal of the European Union.

WARNING 2 — Other Union legislation may be applicable to the product(s) falling within the scope of this standard.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Copyright in BSI publications

All the content in BSI publications, including British Standards, is the property of and copyrighted by BSI or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Save for the provisions below, you may not transfer, share or disseminate any portion of the standard to any other person. You may not adapt, distribute, commercially exploit or publicly display the standard or any portion thereof in any manner whatsoever without BSI's prior written consent.

Storing and using standards

Standards purchased in soft copy format:

- A British Standard purchased in soft copy format is licensed to a sole named user for personal or internal company use only.
- The standard may be stored on more than one device provided that it is accessible by the sole named user only and that only one copy is accessed at any one time.
- A single paper copy may be printed for personal or internal company use only.

Standards purchased in hard copy format:

- A British Standard purchased in hard copy format is for personal or internal company use only.
- It may not be further reproduced – in any format – to create an additional copy. This includes scanning of the document.

If you need more than one copy of the document, or if you wish to share the document on an internal network, you can save money by choosing a subscription product (see 'Subscriptions').

Reproducing extracts

For permission to reproduce content from BSI publications contact the BSI Copyright and Licensing team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email cservices@bsigroup.com.

Rewards

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
